

END OF LIFE MANAGEMENT GUIDE

Ergonomyx is committed to creating products that maintain positive impacts throughout their entire lifecycles. This requires careful consideration of the inputs and outputs at all stages from design conception to disposal. While our customers can be confident in their product's ability to stand the test of time, there may come a day when their needs change or they decide to upgrade to a newer product. This document addresses that possibility by summarizing the end-of-life management options for our products.

Disassemble

Disassembly instructions for all our **Smart Sit Stand** products on our website. We encourage you keeping all tools from assembly for ease of disassembly.

Reuse

If your needs change or you choose to replace your Ergonomyx product with a newer model, we strongly encourage to donate your functional products to a **local charity or thrift store**, or through online classifieds such as Craigslist.

Recycle

We support efforts to recycle our products by providing disassembly instructions that indicate which components are recyclable. **Please see the next page for recycling guidelines of our materials**

Repair

We will try to accommodate requests for product repair on a **case-by-case basis**. Faulty parts can be shipped back to us for repair, and/or replacement parts can be shipped back to you in no time!

Refurbish

If you are unable to find a charitable organization to donate. You can always contact a **third-party refurbishing company** who can take the product from your location free of charge!

END OF LIFE MANAGEMENT GUIDE

We support efforts to recycle our products by providing disassembly instructions that indicate which components are recyclable. The following is a guideline for typical materials found in Ergonomyx products, which could be recycled at local facilities within your area

(please contact them for more information)

Recycling Guidelines

Material	Furniture Component	End of Life Opportunity	Online Resource
